

Summary of Data Cleaning:

- ✓ No missing values found in the dataset.
- ✓ No duplicate rows found after sorting and checking.
- ✓ Gender values were already standardized as 'Male' and 'Female'.
- ✓ Renamed column headers to clean format: customer_id, gender, age, annual_income, spending_score.
- ✓ Verified column values manually:
 - age, annual_income, spending_score contain only numbers
 - gender contains only text values ("Male", "Female")
